## News Release

### **FIELDEx SAMPLES UP TO 11 GRAMS PER TON OF GOLD IN NORTHERN QUEBEC – CONTINUES DRILLING**

Rouyn-Noranda, Quebec, March 5th, 2008. Fieldex Exploration Inc. (FLX :TSXV and F7E : Frankfurt ) is pleased to announce additional grab samples results from a 1.3 metre wide quartz breccia vein structures hosted in a quartz monzonite intrusive complex at the Temiscamingue property located in Northern Quebec.

Two grab samples 3793 and 3794 are 25 metres apart and returned 10.97 and 10.23 grams of gold per ton with significant silver.

Sample No.	Gold (g/t)	Silver (g/t)
3793	10.97	22.7
3794	10.23	34.3

The Guimond gold showing is on ground held by Superior Diamonds, of which Fieldex has 100 per cent of the gold rights, with Superior entitled to a 2-per-cent net smelter royalty.

#### Drilling

Fieldex has also completed the first hole of a 500-metre drill program on the Guimond project.

The first hole, collared at minus 45 degrees, intersected at 122.40 m to 123.50 m a quartz epidote vein with disseminated pyrite. The vein is similar to the vein in surface which returned value cited above. Several similar quartz epidote with sulphide veins were also encountered along the hole and could contained gold values as well. Core samples will be sent to Techni-Lab with assay results expected shortly. The next series of holes will target the East Vein structure, approximately 100 feet (33 metres) away from the old working (trenching), on a 50-foot-by-50-foot step-out pattern to delineate and determine the continuity of grade within the gold-bearing zone. Additional

exploratory drilling to determine the strike extent of the vein structures is also planned from strategically located drill pads.

#### Quality control

Assay samples are taken from drill core sawed in half with one half sent to a commercial laboratory and other half retained for future reference.

#### Qualified person

The Temiscamingue projects are being supervised by Laurent Hallé P.Geo, the qualified person for these projects.
