

— Contact  
 - - - Inferred Contact  
 - - - - Inferred Gradational Contact

Younging Direction Determined by pillow keels or fining of sediments, volcaniclastics, or spinifex textures

UP: Schistosity / Gneissosity

**Legend**

- |   |                        |  |
|---|------------------------|--|
| Sulfides associated with quartz veins                 | <b>Intrusive Rocks</b> | <b>Metamorphic Rocks</b>                   |
| Gossin  | Gabbro                 | Amphibolite                                |
| <b>Supracrustal Rocks</b>                             | Monzodiorite           | Biotite Schist                             |
| Basalt  | Monzonite              | Biotite-amphibolite Schist                 |
| Komatiite   | Granite and Pegmatite  | Fine grained white mica-amphibolite Schist |
| Tuffite Mixture of sediment and pyroclastic materials | Pegmatite              | Augen Gneiss                               |
| Sediments   |                        | Biotite-amphibolite Gneiss                 |
| Graphite  |                        | Property limits                            |
